Pragma Fortress SSH is Now Certified for Windows Server 2008 R2

Pragma is Certified for Windows Server 2008 R2 and is Compatible with Windows 7

AUSTIN, Texas {October 22, 2009} Pragma Systems, a leading provider of enterprise-class remote access and security software for Windows, announced that its Pragma Fortress SSH Server has attained the status of Certified for Windows Server 2008 R2 and is compatible with the new Windows 7. VeriTest(www.veritest.com), an independent third party laboratory authorized by Microsoft Corp. for certifications, performed the extensive testing and validation process. Being Certified for Windows Server 2008 R2 demonstrates that Pragma Fortress SSH Server meets Microsoft's technical standards for best platform practices and has met the stringent criteria indicating reliability and technical excellence. Pragma Fortress SSH ClientSuite and Pragma Telnet Server products have also been updated to support Windows 7 and Windows Server 2008 R2. Thus Pragma is able to offer end-to-end secure solutions for data centers and corporate infrastructure using the latest Windows operating systems.

 "When customers deploy Pragma's Fortress SSH technology, they are reassured that by being Certified for Windows Server 2008 R2, the software will work smoothly in conjunction with the latest Microsoft server operating systems," said David Kulwin, CTO of Pragma Systems. "Pragma Systems values the Microsoft server certifications as it helps customers have peace of mind knowing that Pragma solutions have passed the reliability, security, scalability and stress tests requirements of server environments."

Pragma Fortress SSH is an enterprise grade SSH, SFTP and SCP server for the Windows Server operating system. The Fortress SSH Server allows secure remote access and high-performance managed file transfer using SFTP and SCP protocols. In addition, Pragma's Server uses patent-pending technology to deliver Windows command sessions to remote clients efficiently, securely and reliably as if the user was sitting next to the computer. This allows systems administrators and authorized users secure access to remote systems and the ability to perform secure file transfer to access critical data. Fortress SSH Server also works seamlessly with Windows PowerShell and Microsoft Hyper-V virtualization server. It runs in Windows Server 2008R2/2008/2003/2000 and Windows 7, Windows Vista, and Windows XP. Three binary versions are offered : 32-bit, 64-bit or Itanium IA64.
