

Pragma Sponsors PowerShell Community

AUSTIN, Texas {August 26, 2009} [Pragma Systems, Inc.](http://www.powershellcommunity.org) is pleased to announce their sponsorship of the popular PowerShell Community organization found on the web at www.powershellcommunity.org. This community was founded in part to provide a forum for user forums, blogs and information for Microsoft's new Windows PowerShell. The PowerShell Community organization, founded by Marco Shaw and Hal Rottenberg, is considered by many to be the leading source of new and upcoming trends, feedback, and news on PowerShell related implementations.

Microsoft Windows PowerShell command line shell and scripting language helps IT professionals achieve greater control and productivity across their Windows infrastructure. Using a new admin-focused scripting language, more than 130 standard command line tools, and consistent syntax and utilities, Windows PowerShell allows IT professionals to more easily control system administration and accelerate automation. Microsoft's PowerShell technology brings an ultra modern shell to the industry. It clearly surpasses the Unix shell in both its set of features and functionalities, as well as being able to pipe .NET objects - not just text streams - as Unix shells do. Pragma fully supports PowerShell and the company's recently released Gen 2 [Pragma Fortress SSH Server](#) and [Pragma TelnetServer](#) provides comprehensive support for Microsoft's new [Windows PowerShell offering](#).

"We are very excited to have Pragma Systems join as a sponsor of our online community dedicated to PowerShell," said Marco Shaw, co-founder of PowershellCommunity.org. Sponsorships help us to grow the community by connecting to various user groups and also providing additional communication avenues such as having a presence at major technical shows throughout the world."

"PowerShell advances Windows management greatly leveraging full .NET power. It brings new life to SSH and Telnet based remote management with a much [more](#) advanced shell than [the](#) old cmd.exe," said David Kulwin, CTO of Pragma Systems. "PowerShell can make SSH and Telnet products more popular and improve the productivity of our customers."
